BNR Remodel Update 8

01/03/2019

BNR Remodeling Project

Jan. 3, 2019

During the holiday break the remodeling plans moved forward. The west entrance to the BNR is still open, but it will close soon as construction crews will begin digging the basement for the new lobby. Access to the BNR will be through the east side of the north and south wings. If you are teaching in the BNR Auditorium, you should let students know of these entry and egress plans. A temporary wall will be constructed to separate the basement area of the west wing of BNR from the new basement construction. This should pose a small disturbance in the hallway outside of the Atwood, Hammill, Brahney labs.

The Red Parking Lot east of the new Life Sciences Building will be open to vehicles. Four slots for plug-in electric cars are available for those with EV parking permits.

The Life Sciences Building is open for business as of January 7. Departments in QCNR will be teaching in rooms 225 and 225A. These rooms have computer work stations equipped for the GIS courses.
