

Seasonal research assistants in plant ecology, Utah and Idaho

Dr. Peter Adler (Utah State University) and Dr. Matt Germino (USGS) seek experienced field ecologists to help implement and monitor a series of experiments focused on understanding how climate change will affect the trajectory of the cheatgrass (*Bromus tectorum*) invasion in the Intermountain West. Two positions are available: one stationed Logan, Utah with [Adler's research group](#), and the other stationed in Boise, Idaho with [Germino's research group](#). These are seasonal, hourly positions (\$12-13/hr) for the period June-September, 2020.

Responsibilities include:

- Assist with implementation of large common garden experiments, including seed preparation, site preparation, and seed planting.
- Collection of data on plant species composition.
- Data entry, including digitization of maps using ArcGIS, and QAQC.

Desired qualifications include:

- Previous field experience.
- Knowledge of Intermountain West flora.
- Ability to perform tedious tasks over long periods under adverse weather conditions.

To apply, please email a cover letter, CV, and contact information for three references to Peter Adler (peter.adler@usu.edu). Please indicate if you are interested in the Boise and/or Logan positions.
