

The National Climate Adaptation Science Center (CASC) is seeking to hire a full-time student or recent graduate to manage a recreational fishing database. The successful applicant will compile a database of creel and angler survey data for inland waterbodies from all 50 states and assist a team of NCASC fish biologists to develop a spatially-explicit model of recreational harvest under global change. Applications are due by January 31. [<https://www.usgs.gov/center-news/job-opportunity-national-casc-seeking-recreational-fishing-database-manager>]
