Role Description

Utah State University is seeking a vegetation technician for the assistance in a graduate student’s research. The research is addressing sage grouse long-term response to juniper and pinyon removal treatments. The technician would assist with measuring vegetation characteristics of sagebrush habitat in southern Utah. The technician would work one on one with the graduate student for ten weeks assisting with data entry and measuring vegetation. Work would be done in sagebrush habitat on private and public lands. The ideal technician would have experience in identifying and measuring grasses, shrubs, and forbs commonly found in sagebrush habitat. Work will be conducted during hot summer conditions. A work truck will be provided. Housing will be provided. Housing would consist of a shared house with graduate student located in Alton in close proximity to field site. Alton is a small town located in southern Utah off of U.S. route 89. Appropriate Covid protocols will be in place.

Qualifications: Applicants must have a current U. S. driver’s license. Applicants must also demonstrate proficiency in vegetation identification and data entry. Experience driving 4WD vehicles and ATVs preferred.

How to Apply: Interested applicants should contact Ben Donnelly (bdonnel2@gmail.com) with a cover letter, transcripts, resume, and 3 references.
