

The S.J. & Jessie E. Quinney College of Natural Resources is launching a new iPhone app called *DeerTrax*. The app was developed in cooperation with Systems Administrator Wes James and Associate Professor Robert Schmidt. It is designed to assist local cities and wildlife agencies in mapping the distribution of urban deer in Cache Valley. Download the free app by searching *DeerTrax* in the App Store of your iPhone.

You use the app by selecting the Report menu and then by selecting a deer photo in your library or by taking a photo of an urban deer and then selecting Send Data. The location of the deer will appear on the distribution map after review. We anticipate that classes may want to use the data from this application in various assignments. This will also provide city officials and agencies with information on urban deer distribution.
